# Social Media Marketplace

## *Navigate around the site*

1. *Login/Registration*

The landing page would lead to the login page as shown below.

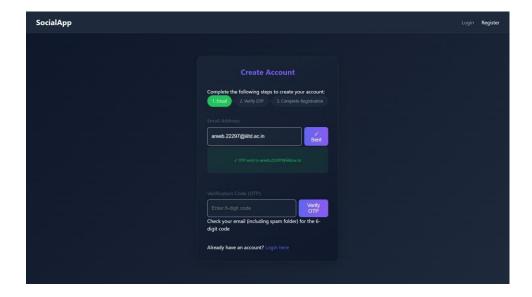

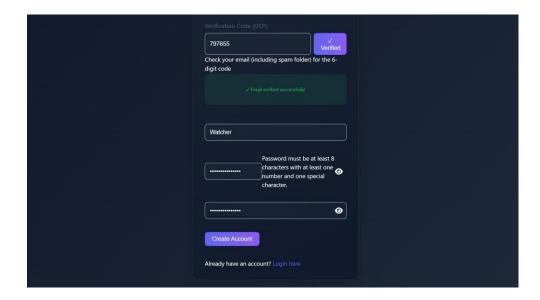

If visited first time, you'd need to create an account that you can do by pressing the create an account button below the login form or click the Register button at the top-right of the page.

You'd need to enter an email, only allowed from selected valid email providers.
(Refer to Security Section for more information)

After putting the email address, you'd receive an OTP at your mail for authentication, likely in spam section. After putting the correct OTP, you'd finally get the option to choose your alphanum username that must be unique to our database and then you can choose the password following the prompted criteria and finally create the account.
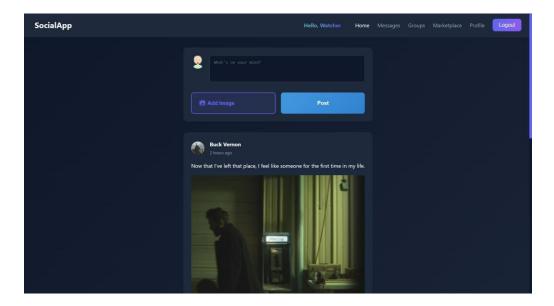

If account registration is successful, you'd be redirected to login page.

2. *Home Page*

After successful login, you'd land at the homepage with a static navbar where you can visit other pages.

Home page contains users' image post with caption and likes.
(There is no make a post functionality.)

3. *Profile*

At the profile section, you can change your profile/user details.
If the user is unverified, it would be clearly shown in blaring red in the profile banner.
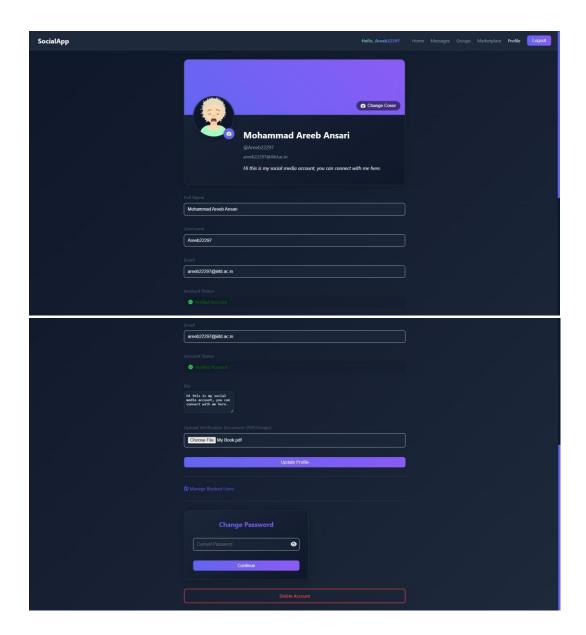

You get the option to change your image.
User also need to add a full name before making any changes. Users can also add bio visible to others.

Here, they can upload an image or pdf in document verification to get verified and unlock full access to all the features.
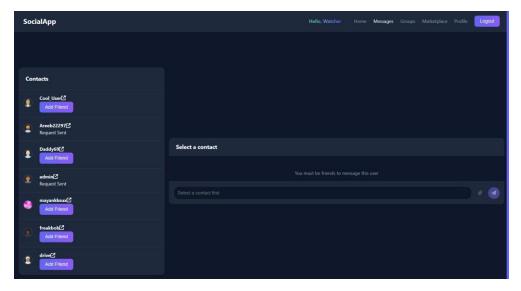

Any document verification request would reach to administrator that would get verified after document inspection and user would finally get the verified status.

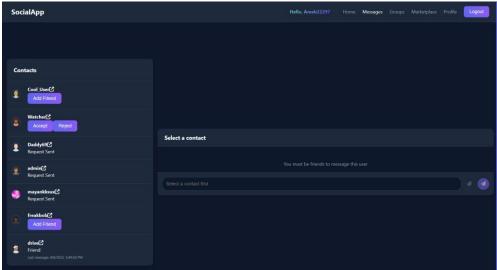

Users also get the option to change their password or delete their account after authenticating from their registered against the received OTP.
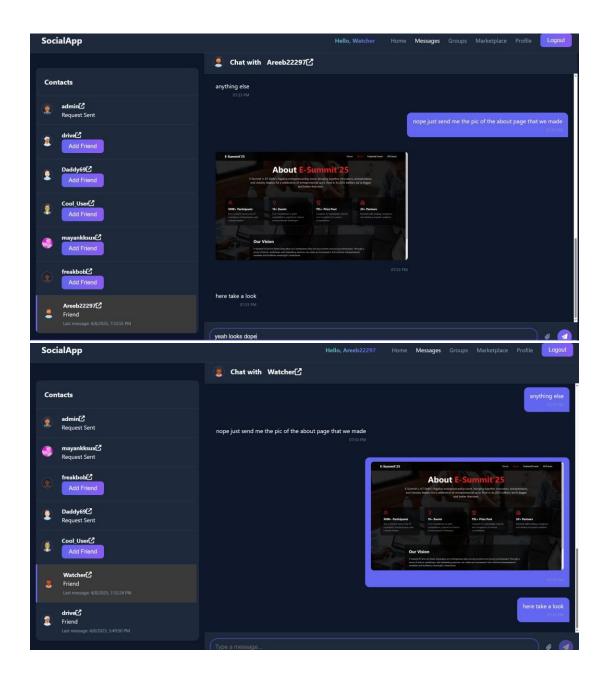

4. *Messaging*

From the navigation bar, users can land the messaging panel. Here they can see the list of all the available users, visit their page or send them friend request and also accept the received friend request and users can only message their friends.

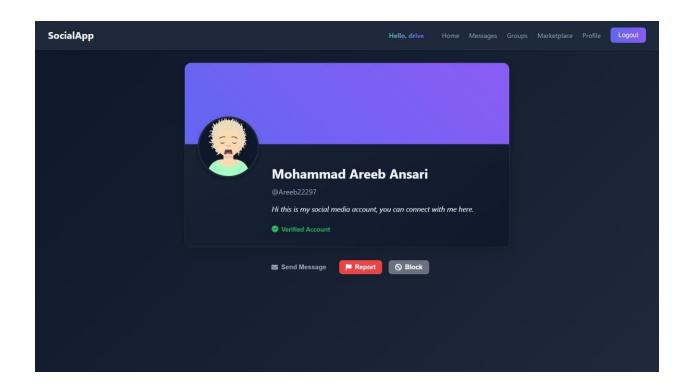

After clicking on a user's profile image, a user can finally open the messaging section where they get connected to a realtime websocket chat-room.

By clicking at the attachment icon, user can also send image/video to the other user.

Users can also view profiles of other users, read their full name, username and bio.
Users also get the luxury of reporting or blocking another user through the same menu.
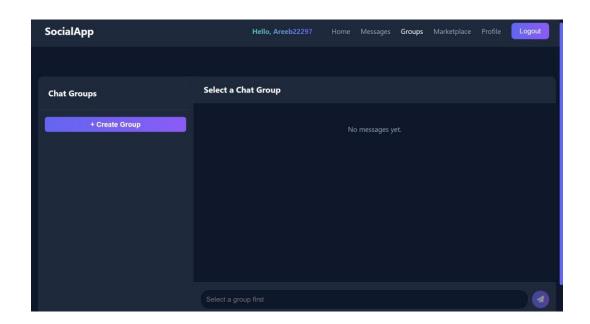

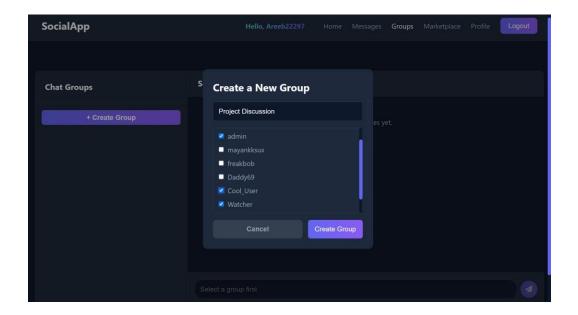

5. *Group Messaging*
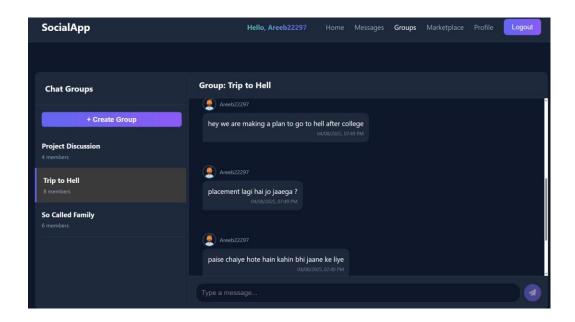

Group messaging can only be accessed by verified users.

Users can create groups with other users and send message to all the users in that chatroom.
